Midas Flagtag®

Overview

Frequency Band
UHF 860 - 960 MHz

Chip
NXP UCODE 8

Antenna Dimensions
34.41 x 18 mm / 1.36 x 0.71 in

International Standard
ISO 18000-6C, EPC Class 1 Gen 2

Industry Segments
Logistics
Industrial Applications
Beauty and Personal Care

Applications
On-Metal Asset Tracking
Metal and Liquids
Supply Chain Management

RoHS
EU Directive 2011/65/EU and 2015/863 Compliant

REACH
Regulation (EC) No 1907/2006

Outperforming tag for metallic surfaces and everyday objects

Our Midas Flagtag® is designed for item-level tagging on diverse surfaces, especially metallic surfaces like foil packaging. Midas Flagtag® is a cost-efficient UHF RFID on-metal solution for product or part authentication, supply chain and asset management, when compared to other foam-based inlays and hard tags designed for use in tougher environmental conditions. The tag can also be used on plastic and cardboard surfaces and works as a standard tag.

Midas Flagtag® has an innovative small form factor with a total size of 62 x 21 mm when used as a standard flat label / sticker. Its special feature is that a flag can be created at the end of tag with a final paper tag size of 43 x 21 mm after folding, and with an exposed flag size of 17 x 21 mm. The folded part of the tag sticks out of the metal like a flag, and the attached antenna part uses the metal surface as part of the antenna structure to increase the performance of the tag. Read distances of over 10 meters can be achieved, depending on the geometry and size of the metal object. The tags are compatible with RFID printers for easy printing and encoding.

Our Midas Flagtag® is equipped with the NXP UCODE8 IC that features an Autotune function, which helps Midas Flagtag to work at peak efficiency, even in rapidly changing environments. Furthermore, the NXP UCODE 8 chip offer unique TID, enabling pre-serialized EPC, and is 100% performance tested.

Folding instruction

1. Peel off Midas Flagtag® from substrate material, delivered in roll format.
2. Fold the white rectangle part along the perforation line to cover the transponder.
3. Apply the tag with the visible transponder area onto the metallic object and allow the folded flag to stick out.
